

DEPARTMENT OF ARTIFICIAL INTELLIGENCE & DATA SCIENCE

Course Code & Name: CCS370 & UI&UX Design

(Regulations 2021)

UNIT-1

PART –A

1. What is UI?
2. List the important elements of UI.
3. Differentiate Divergent and Convergent Thinking?
4. What role does empathy play in UX design?
5. List few types of UI.
6. How can UI design contribute to a positive user experience?
7. In which stage of Design Thinking do designers ideate and brain storm solutions?
8. What role does prototyping play in the Design Thinking process?
9. Differentiate brain storming and game storming?
10. Define Observational empathy.

PART- B

1. Describe about UI elements and patterns with appropriate diagrams.
2. Explain the core stages of Design Thinking and their significance in the design process.
3. Explore the role of observational empathy in the design process. How does observing user behavior contribute to the creation of meaningful and user-centric UI/UX designs? Provide examples of how observational empathy has been successfully applied in real-world design projects.
4. Distinguish between divergent and convergent thinking in problem-solving. How do these thinking styles align with specific stages of Design Thinking, and how can they be effectively applied to enhance the overall user experience in UI/UX design?
5. Compare and contrast brainstorming and game storming as ideation techniques. Provide examples of scenarios where each method might be more suitable in the context of UI/UX design, and explain the benefits of integrating these techniques into the design process.
